

Proof of Concept Kits: Industrial Vibration Monitoring

INDUSTRIAL VIBRATION MONITORING

Designed to help kick start your projects, the Alliot Industrial Vibration Monitoring Proof of Concept kit can be useful in a wide range of applications where machinery is in use. Ideal for monitoring sudden movements and motion in motors and rotating machinery, the industrial vibration monitoring kit includes:

- Vibration Sensor (spring type)
- Event counter
- Activity timer
- IoT Gateway (with Ethernet/cellular 3G/4G connectivity)
- Sensor & Gateway provisioning
- Server access for 3 months
- Dashboard
- Access to Alliot's expert technical support
- All required batteries

RRP: £609.29+VAT

We know industrial equipment often involves large investment and can incur high costs if they cease to operate. With the use of the vibration monitoring proof of concept kit, you can demonstrate the importance of detecting potential faults, identifying general wear and tear during the lifecycle and/or to highlight where condition-based maintenance needs to be carried out before major issues arise.

GETTING STARTED

Available for fast deployment throughout Europe, the Alliot proof of concept kit can be tailored to your individual preferences, get in touch to discuss your requirements.
