

Proof of Concept Kits: Single Phase Energy Monitoring

SINGLE PHASE ENERGY MONITORING

Designed to help kick start your projects, the Alliot Single Phase Energy Monitoring Proof of Concept kit includes everything you need to test and demonstrate your solutions quickly and effectively.

Compiled from industry-leading robust hardware and access to the very best server and dashboard software, the single-phase energy monitoring proof of concept kit includes:

- 3 x current meters (single-phase split-core CT) 60A
- IoT Gateway (with Ethernet/cellular 3G/4G connectivity)
- Sensor & Gateway provisioning
- Server access for 3 months
- Dashboard
- Technical support from Alliot's expert team
- All required batteries

RRP: £655.85+VAT

Ideal for measuring energy consumption in single-phase electrical systems, this kit is ideal for projects aimed at encouraging the cost-effective operation of machines and installations by identifying overall energy consumption, energy efficiency of individual supplies and/or abnormal usage.

GETTING STARTED

Available for fast deployment throughout Europe, the Alliot proof of concept kit can be tailored to your individual preferences, get in touch to discuss your requirements.
